Bomb Search - Preliminary UXO Risk Assessment

Bomb Search provides accurate Unexploded Ordnance (UXO) source information and risk assessment for clients' sites in the UK. Bomb Search analyses over 40 different data sets from a nationwide geospatial database of UXO threats and the desktop reports conform to current best practice developed and recommended by CIRIA and endorsed by the Health and Safety Executive. Recommendations are based on the probability of the UXO threat identified, a UXO encounter and WWII high explosive bomb density information. This report is ideal for sites or properties where the risk from Unexploded Ordnance is not known.

Key Features

- Data analysis containing a list of UXO threat sources
- Recommendations based on the probability of the UXO threat identified
- An A4 map displaying the probability of UXO encounter
- An A4 map displaying the WWII high explosive bomb density

Ensure Your Clients Are Protected

The Preliminary UXO Risk Assessment is the most comprehensive and cost effective UXO screening report available in the industry, allowing you to mitigate your risk on site. This report offers fast delivery to your desk-top and will be returned within 2 working days.

Case Study

Crossrail, the largest civil engineering project in the UK and the largest single addition to the London transport network for over 50 years, were faced with a UXB threat across certain parts of their scheme. This case study describes the problems that Crossrail faced, how they helped to establish and to document UXB best practice and how, with 6 Alpha's guidance, they employed high resolution datasets to articulate and manage the UXB risks posed in order to deliver project safety at best value.
