PROFESSIONAL OPINION

This summary should be read in conjunction with the full report. The Professional Opinion below summarises the risks and other potential issues associated with the property. The Professional Opinion results are displayed as GREEN for PASS, GREEN for PASS WITH ADVISORY, and RED for FURTHER ACTION. A PASS is given if there is no specific risk. A 'PASS WITH ADVISORY' is given where there is no specific risk from an environmental perspective, but where the client should be made aware of the feature(s) and/or information within the section as they may consider it affects their quiet enjoyment of the property. A 'FURTHER ACTION' is given if there is a specific risk and a specific further action is advised. The Pass, Pass with Advisory, or Further Action results should be disclosed to client and /or lender and / or insurer as appropriate. The Professional Opinion is summarised below. The Professional Opinion summary will indicate where more details on Advisory or Further Actions are available in the body of the report.

If you would like the Professional Opinion to be reviewed based on additional information you have obtained, please send this information to us at info@futureclimateinfo.com. We will review the information and, where appropriate, revise the Professional Opinion normally within 24 hours.

1 ENVIRONMENTAL (INC. CONTAMINATED LAND)

1.02 REMEDIATION INSURANCE

YES

This report provides additional protection of up to £100,000 in the event that the Local Authority serves a Part 2A Remediation Notice and remediation costs have to be borne by the property owner. Terms and condition apply; please visit www.futureclimateinfo.com/terms-and-conditions.html.

If you wish to extend this cover, please contact CLS who are able to offer Contaminated Land Insurance for a period of 12 years. Please visit www.csl.co.uk, call 01732 897 530 or purchase via your reseller.

1.03 OFFICIAL CONTAMINATED LAND | REGISTER ENTRIES & NOTICES

PASS

Teignbridge District Council data indicates that the property is not within 25 metres of an area of land that has been designated Contaminated Land under Part 2A of the Environmental Protection Act 1990.

1.18 PAST INDUSTRIAL LAND USES

PASS

In the Professional Opinion of Wilbourn & Co. Chartered Surveyors the property is not on or within 25 metres of any former industrial land uses depicted on historic Ordnance Survey maps from which the level of environmental risk is likely to result in the land beneath the property being determined Contaminated Land within the meaning of Part 2A of the Environmental Protection Act 1990.

1.21 RADON GAS

PASS (WITH ADVISORY)

Data provided by the British Geological Survey (BGS) indicates that the property is in a Radon Affected Area.

This is because the property is in an Intermediate probability radon area (3% to 5% of homes are estimated to be at or above the Action Level for homes of 200 Bq m⁻³).

Radon is a colourless, odourless radioactive gas formed by the radioactive decay of the small amounts of uranium that occur naturally in all rocks and soils. Studies in many countries have shown that increased exposure to radon increases the risk of lung cancer.

Whether or not the property is actually above or below the Action Level can only be established by testing.

ADVISORY: Public Health England provides a radon testing service which can be accessed at www.ukradon.org. The radon level should be measured in the property and, if necessary, remediated to below a Target Level of 100 Bq/m³. Enquiries can also be made to the vendor as to whether radon levels have been measured in the property, whether remedial actions were taken and if re-testing confirmed the effectiveness of installed measures.

2.08 GROUNDWATER FLOODING

PASS

Data provided by the British Geological Survey (BGS) indicates that the property is not located within 25 metres of an area where there is a potential for groundwater flooding.

2.09 FLOOD STORAGE

PASS

Data provided by the Environment Agency indicates that the property is not located within 25 metres of a Flood Storage Area (land designed and operated to store flood water).

2.10 SEWER FLOODING

NOTE

Please note that information on Sewer Flooding is not included in the flood risk assessment in this report. This information is held by the water company responsible for the public sewer network. Sewer flooding happens for a number of reasons but is most likely to occur during storms, when large volumes of rainwater enter the sewers and sewage escapes from a manhole or a drain, or by backing up through toilets, baths and sinks. Sewer flooding can also occur when pipes become blocked.

3 GROUND STABILITY

3.01 PROFESSIONAL ADVICE

For professional advice and guidance relating to the impact of any ground stability issues on your property please contact a Chartered Building Surveyor.

Stace LLP, Eldon House, 2-3 Eldon Street, London, EC2M 7LS. Email: london@stace.co.uk Tel: 0207 377 4080 and quote reference "FUTURE 1000020361"

3.07 LANDSLIPS/SLIDES | SLOPE INSTABILITY

PASS (WITH ADVISORY)

The British Geological Survey indicates that the property is located on or within 25 metres of an area where slope instability problems may be present or anticipated.

ADVISORY: There should be no increased insurance risk due to natural slope instability problems. However, there is the possibility of slope instability problems after major changes in ground conditions.

If development of the property is intended specialist advice may be needed about the implications for stability if any large changes to drainage or excavations are planned to take place near to buildings.

If you are concerned about any irregular topography present at the property you may wish to contact a Chartered Building Surveyor.

3.11 MINING | HAZARDS (NON-COAL)

PASS (WITH ADVISORY)

The British Geological Survey indicates that the property is located within 25 metres of an area that is likely to be affected by former non-coal shallow underground mining. BGS has indicated that the risk within this area is sporadic underground mining of restricted extent may have occurred. potential for difficult ground conditions are unlikely and localised and are at a level where they need not be considered

4 NOTES & GUIDANCE

4.1 REPORT NOTES

METHODOLOGY

This report has been produced solely for the purposes of screening the subject property for the dataset categories listed in 4.2. This report is a desk study risk assessment, and no site or ground inspection or physical investigation has been carried out. The impacts of the risks addressed in this report are normally measured in terms of quiet enjoyment, saleability, mortgageability, and the value of the property; the professional risk assessment in this report is provided by a Chartered Environmental Surveyor who is regulated by RICS.

4.2 REPORT DATASET CATEGORIES

METHODOLOGY

The dataset categories analysed in this report are listed below. For more information on these dataset categories, please visit our website www.futureclimateinfo.com

1.01 Environmental Map, 1.02 Remediation Insurance, 1.03 Official Contaminated Land | Register Entries & Notices, 1.04 Artificial Ground, 1.05 Current Industrial Land Uses, 1.06 Electricity Infrastructure | Electricity Pylons, 1.07 Electricity Infrastructure | Overhead Power Lines, 1.08 Electricity Infrastructure | Power Cables and Lines, 1.09 Electricity Infrastructure | Substations, 1.10 Environmental Permits | Closed Mining Waste Facilities, 1.11 Environmental Permits | End of Life Vehicles, 1.12 Environmental Permits | Industrial Sites, 1.13 Environmental Permits | Waste Sites, 1.14 Fuel / Petrol Stations, 1.15 Landfill | Current, 1.16 Landfill | Historic, 1.17 OFCOM Mast Site Clearance Locations, 1.18 Past Industrial Land Uses, 1.19 Pollution Incidents, 1.20 Potentially Infilled Land, 1.21 Radon Gas, 1.22 Surface Dangers or Hazards | COMAH Sites, 1.23 Surface Dangers or Hazards | Hazardous Waste Registrations, 2.01 Flood Risk Map, 2.02 River and Sea Flood Risk, 2.03 Surface Water Flood Risk, 2.04 Surface Water Features, 2.05 Flood Insurability Index, 2.06 Historic Flood Map, 2.07 Historic Flooding, 2.08 Groundwater Flooding, 2.09 Flood Storage, 2.10 Sewer Flooding, 3.01 Professional Advice, 3.02 Geohazards | Collapsible Deposits, 3.03 Geohazards | Compressible Ground, 3.04 Geohazards | Running Sand, 3.05 Geohazards | Shrink-Swell, 3.06 Landslips/slides | Mass Movement, 3.07 Landslips/slides | Slope Instability, 3.08 Mining | Cheshire Brine Compensation Area, 3.09 Mining | Coal Mining, 3.10 Mining | Mining Cavities (Non-Coal), 3.11 Mining | Hazards (Non-Coal), 3.12 Modified

Ground | Artificial Ground, 3.13 Modified Ground | Historical Analysis, 3.14 Natural Cavities

4.3 CONTAMINATED LAND

METHODOLOGY

The contaminated land risk assessment used in this report takes account of statutory Contaminated Land as well as information on the various land uses or processes which may have the potential to create Contaminated Land. These include, for example, relevant former industrial land uses shown on historical maps, current industrial land uses, and relevant industrial processes. Risks such as waste sites, licensed discharge consents, radioactive substances, pollution prevention and control licences, explosives, and dangerous substance inventory, Control of Major Accidents and Hazards (COMAH), and Notification of Installations Handling Hazardous Substances (NIHHS), and Planning Hazardous Substance sites are all very highly regulated and as such are excluded from the Contaminated Land risk assessment. Such features at or nearby the property are features that may be considered in the survey or valuation.

4.4 FLOOD INSURANCE

METHODOLOGY

The answers given on the availability of flood insurance reflect the flood re - insurance scheme, known as Flood Re, which was launched 1st April 2016. Flood Re has been set up to help those households who live in a flood risk area find affordable home insurance. Flood Re makes no difference to how to purchase home insurance, whether that's through a price comparison site, directly from an insurer or through a broker. There is no need to contact Flood Re directly. Flood Re is intended to give peace of mind that, even after a flood claim, flood insurance should still be available with affordable premiums and excesses. Not every property is eligible for Flood Re. For full information about the scheme, including the eligibility criteria, please see <http://www.floodre.co.uk/>.

The insurance availability assessment given in this report is based solely on the JBA Insurability Index which shows the combined flood hazard, in 5 metre grid cells, from surface, river, and sea flooding. The likelihood of flood insurance being available is represented by colour indicators (black, red, amber or green). These indicators provide no assurance or guarantee that insurance / insurance covering flood risk will or will not be available, no reliance should be placed upon the colour indicators, and appropriate additional enquiries should be made as to the actual availability (or not) of insurance / insurance covering flood risk. Every insurance application is unique, so other perils, risks or a previous claims history may mean that insurance is not available in any event.

Future Climate Info has partnered with HomeProtect to deliver home insurance for residential properties in areas considered to be at risk of flooding. HomeProtect policies are underwritten by AXA Insurance plc. Get an immediate, online quote at <http://www.homeprotect.co.uk/floodcover>

4.5 FLOOD RISK AND IMPACT ON VALUE

METHODOLOGY

The flood risk assessment in this report is based on the best available historic, river, sea, and surface water flooding data. This includes data supplied by the Environment Agency and Jeremy Benn Associates (JBA). A flood risk assessment using these data sources, however, should not be regarded as definitive. Because the flood risk assessment is based on theoretical risk models, there is always the possibility that exceptional weather conditions and/or failure of flood defences can cause flooding that was not anticipated. No site visit has taken place.

The Professional Opinion on flood risk given in this report is based on a flood risk assessment of River, Sea and Surface Water flooding, using Environment Agency and JBA data. If there is a history of flooding it is reported but it is not included in the flood risk assessment because circumstances can change, for example the provision of flood defences, causing the flood conditions to be different today. Susceptibility to groundwater flooding is reported but is also not included in the flood risk assessment; this is because the data identifies geological conditions which could enable groundwater flooding to occur, but does not model the risk of such an occurrence.

RICS advises that flood risk does reduce the value of a property, compared with a similar property without such a risk. This depends on the particular circumstances of the property, any history of flooding, and the provision of flood defences. For some 'at risk' property, for example, the reduction in value may be offset by an increase due to the property's amenity value close to a river, stream or coast.

4.6 FLOOD PLANNING, FLOOD WARNING AND REPORTING, AND FLOOD RESISTANCE AND RESILIENCE MEASURES

METHODOLOGY

Detailed advice on flooding and resistance and resilience measures, flood risk planning and costs, and flood warning and reporting systems, is available from the following websites:

info@futureclimateinfo.com, which is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code:

- Provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom.
- Sets out minimum standards which firms compiling and selling search reports have to meet.
- Promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals.
- Enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports.
- act with integrity and carry out work with due skill, care and diligence
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award compensation of up to £5,000 to you if he finds that you have suffered actual loss as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs Contact Details:

The Property Ombudsman scheme, Milford House, 43-55 Milford Street, Salisbury, Wiltshire SP1 2BP
Tel: 01722 333306, Fax: 01722 332296, Email: admin@tpos.co.uk, Web: <https://www.tpos.co.uk/>
You can get more information about the PCCB from www.propertycodes.org.uk

PLEASE ASK YOUR SEARCH PROVIDER IF YOU WOULD LIKE A COPY OF THE SEARCH CODE
